

## FOR IMMEDIATE RELEASE

March 11, 2026

### **Axialis IconVectors 1.40 Adds Public MCP Automation for AI-Assisted SVG Icon Workflows**

*Axialis IconVectors 1.40 adds a public MCP server so local AI assistants can create, draw, edit, inspect, render, and export SVG icon projects through the running editor.*

Paris, France - March 11, 2026 - Axialis Software has released Axialis IconVectors 1.40, the latest version of its professional SVG icon design software for developers, interface designers, and technical illustrators.

Axialis IconVectors is a desktop application for creating, drawing, editing, optimizing, and exporting SVG vector icons. It combines precise vector-editing tools with application-oriented export targets and interface workflows tuned for pixel-perfect UI assets.

Version 1.40 introduces a public local MCP integration. With this release, MCP-capable AI clients can connect to the running editor and work with the real document state instead of relying on detached SVG source text. This enables practical AI-assisted workflows for icon drafting, geometry cleanup, palette-based recoloring, rendering, code generation, and export while keeping IconVectors as the source of truth.

Key features of Axialis IconVectors 1.40 include:

- **Public MCP Integration** — A local MCP server exposes IconVectors commands so AI assistants can inspect documents, create and edit vector artwork, run commands, and export results programmatically.
- **Compatible AI Clients** — The public MCP workflow is designed for Codex and ChatGPT tooling, Claude Desktop and Claude Code, VS Code with GitHub Copilot, Cursor, and other clients that support standard MCP servers.
- **Live Editor Automation** — AI agents work against the running IconVectors editor, which keeps the document state, selection, layers, palettes, and exports consistent with what the user sees on screen.
- **Developer Code Targets** — Code generation now includes WPF Geometry, VectorDrawable, and SwiftUI in addition to SVG, Minified SVG, XAML, SVG Symbol, VueTS, ReactTS, and C++.
- **Recolor with Palette** — A new icon command remaps artwork colors to the visually closest colors in the selected palette, making palette-driven cleanup and theme harmonization much faster.
- **Lock Layers** — Elements and groups can now be locked directly in the Layers list to prevent accidental selection or editing while preserving full-document operations such as resize, recolor, and badge actions.
- **Focus Mode** — A focus mode hides toolbars and panels temporarily for a larger drawing area and is available from the keyboard and the View menu.
- **Auto-center Canvas** — An optional toggle can automatically recenter the canvas when the main window is resized or when Focus Mode is entered or exited.
- **GPU Acceleration (Optional)** — Rendering can use GPU acceleration when available to improve interaction smoothness on large or complex drawings.

- **Bug Fixes — Numerous issues have been fixed.**

"IconVectors has always been about giving developers precise control over SVG icon production," said Marc Emile, founder of Axialis Software. "Public MCP support extends that vision by letting AI assistants work with the real editor in a controlled, practical way."

**The new MCP capabilities make it possible to integrate IconVectors into modern AI-assisted workflows while keeping the desktop application as the authoritative editing environment. Users can let an AI assistant draft or modify artwork, then immediately review and refine the result in IconVectors.**

**Axialis IconVectors 1.40 is available now for Windows and macOS. A time-limited evaluation version can be downloaded from the Axialis website.**

**Axialis IconVectors 1.40 is now available for immediate purchase and download from <https://www.axialis.com/iconvectors/> .**

## **About Axialis Software**

Axialis Software is a leading software development company specializing in design tools that prioritize usability, functionality, and efficiency for both professionals and enthusiasts. Known globally for intuitive interfaces and robust features, Axialis Software supports millions of users worldwide.
